

For a fifth Information Technology required major course of an assignment that I found to be helpful and significant in my major, that would be AC-2020-1 Database Concepts of a Capstone Assignment I did from that of the feedback of one of my weekly assignments.

For how I did this assignment, that would be that I made some changes to one of my weekly assignments that consisted of a few deliverables which involved breaking two addresses in the database into that of 4 fields which were Contributors and Employees with then updating the forms from there where the address was shown due to that of the change above. Along with that, there was also one extra credit task that was part of the capstone that I ended up doing which was to write an SQL query to find the contributor that joined that of the earliest considering date joined.

When it comes to what I ended up learning from this assignment, that would be how to take feedback based off a previous assignment I did and using it to update and fix it in certain specific ways.
